-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

After further research another and more pertinent Prior Art teaching has emerged. Therefore it has been found necessary to re-open prosecution of this Application and to issue another Non-Final Office Action based on the newly found prior art. The new Office Action follows.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 6-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Yoshihiko (Japan Pat. No. 03-049293); hereinafter Yoshihiko.

Yoshihiko teaches a printing device for a printed circuit board that provides a constant thickness. A squeegee moves backward and forward on the surface of the printed circuit board. After a board is placed on a base a screen support frame with a solder resist contact the board. The resist is dripped to a squeegee. The squeegee is guided in forward direction and then in a reverse direction. During this back and forth traversal a circuit pattern is coated on the board's surface. Yoshihiko teaches filling a solder resist in a space between two adjacent circuit patterns (Cf. e.g. Fig. 3). It is a fact one cannot construe the language ... A plugging method for a printed circuit board... to read on the disclosure taught by Yoshihiko it would have been obvious to use "plug" the printed circuit board with a solder resist or resin.

Claims 2-5 and 10-18 are held to be allowable.
